+1 (716) 400-3422 | bharathreddykalva10@gmail.com | linkedin.com/in/bharathreddy-kalva | github.com/kalva | Buffalo, NY

PROFESSIONAL SUMMARY

Software Engineer with 2+ years of experience building scalable Java/Spring Boot microservices, customer-facing platforms, and GenAI-powered chatbot and assistant workflows. Shipped production services for a communication platform supporting 300,000+ daily agent logins across 150 countries with 99.9% availability. Experienced in REST APIs, scalable system architecture, distributed systems, LLM prompt integration, conversational flows, observability, CI/CD, AWS deployments, testing, and cross-functional delivery with product, data science, QA, and design teams.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, C++, C, Go (learning)

Backend: Spring Boot, REST APIs, Microservices, Node.js, NestJS, FastAPI, OAuth2, JWT, RBAC, scalable services

AI / GenAI: LLM integration, prompt engineering, conversational AI, chatbot workflows, assistant platforms, OpenAI, Groq, NLU/NLP features

Data / Messaging: PostgreSQL, MySQL, Redis, Prisma ORM, indexing, query optimization, BullMQ, WebSockets

Cloud / DevOps: AWS EC2, RDS, S3, CloudWatch, Docker, GitHub Actions, Jenkins, Vercel, Render, Linux

Quality: JUnit, Mockito, Jest, unit/integration testing, code reviews, logging, monitoring, performance troubleshooting, Agile/Scrum, technical documentation

PROFESSIONAL EXPERIENCE

Software Engineer - Ozonetel (oneCXI)

Aug 2022 - Jun 2024

- Architected and delivered Java/Spring Boot REST microservices for a cloud communication and customer-support platform used by 300,000+ daily agent logins across 150 countries with 99.9% availability.
- Built extensible backend services for agent/customer workflows using OOP design patterns, clean API contracts, PostgreSQL persistence, and service-layer validation to support high-volume operational use cases.
- Reduced API response latency by 35% through SQL query tuning, composite indexing, and backend refactoring, improving real-time user workflows for support and operations teams.
- Implemented JWT authentication, RBAC authorization, and Spring Security controls; added JUnit/Mockito unit and integration tests, reducing security defects by 40% and improving code-review confidence.
- Deployed and monitored microservices on AWS EC2 with CloudWatch alerts, logs, and operational dashboards, reducing unplanned downtime by 25% through faster issue detection and troubleshooting.
- Collaborated with product managers, data scientists, QA, and design teams across 10+ Agile sprint cycles to translate customer requirements into maintainable platform features and release documentation.

Software Engineer Intern - Ozonetel

Jun 2022 - Aug 2022

- Designed and deployed Jenkins, Git, and Docker CI/CD pipelines across development, staging, and production, reducing deployment time by 75% and eliminating manual release errors.
- Documented the release workflow and onboarded 2 engineers, reducing average release preparation time from 4 hours to under 30 minutes.

TECHNICAL PROJECTS

PackMind - Conversational AI Travel Packing Assistant | Next.js, TypeScript, Supabase, Clerk, Groq AI, Twilio, OpenWeather, Vercel

- Built a deployed GenAI assistant that guides users through trip creation and generates personalized, weather-aware packing plans using LLM prompts, destination context, trip type, activities, and travel style.
- Engineered a conversational flow with authenticated multi-user persistence, AI destination intelligence, and WhatsApp/SMS notifications via Twilio for scheduled packing reminders.
- Integrated OpenWeather and LLM-generated local guidance to produce context-aware recommendations, cultural notes, and resource warnings for end users.

Distributed Multi-Client Chat System | JavaScript/Node.js, WebSockets, REST APIs, Distributed Systems

- Built a real-time multi-client chat application with concurrent client sessions, message routing, connection lifecycle handling, and resilient user-to-user communication flows.
- Designed the system around scalable service boundaries and API contracts relevant to customer-facing conversational platforms and support-channel interfaces.

Research Brain - Proactive AI Research Assistant | Butterbase, RocketRide, AI, Automation, Slack, Discord

- Created an AI research assistant that tracks topics, remembers previously learned context, and proactively sends updates through Slack and Discord channels.
- Implemented assistant-style memory and notification workflows to convert ongoing research signals into timely, human-readable updates for users.

HireSense AI - Resume and Job Description Intelligence Platform | React, FastAPI, OpenAI, Python, Vercel, Render

- Built a full-stack LLM application that parses PDF/DOCX/TXT/Markdown resumes, compares them against job descriptions, and returns match scores, skill gaps, ATS feedback, rewrites, and interview preparation.
- Designed a production-ready analyzer with OpenAI-powered responses and deterministic fallback behavior so the application remains usable when AI provider calls fail.

EDUCATION

University at Buffalo (SUNY) - M.S. in Computer Science

Aug 2024 - Dec 2025

Relevant Coursework: Distributed Systems, Operating Systems, Database Systems, Algorithms, Computer Networks

S.N.I.S.T - Bachelor of Engineering in Electrical and Computer Engineering

Jul 2022
